Definition of strap doubles:

In strap doubles the guy is strapped to the rope and this leaves his hands free to assist the girl more effectively. This is probably one of the more dangerous stunts in waterskiing because the skier is strapped to the rope. To decrease the level of danger a device called a quick release is used that allows a spotter to detach the skier from the boat. Strap doubles is by many to be the most beautiful stunt on the water.

- You **MUST** be a current USA Waterski member to participate at the clinic!
- It is suggested that you come as partners. Each year a few people show up with no partner and don't end up doing many lifts.

Directions to Central Middle School:
